GEO-
LOCATION

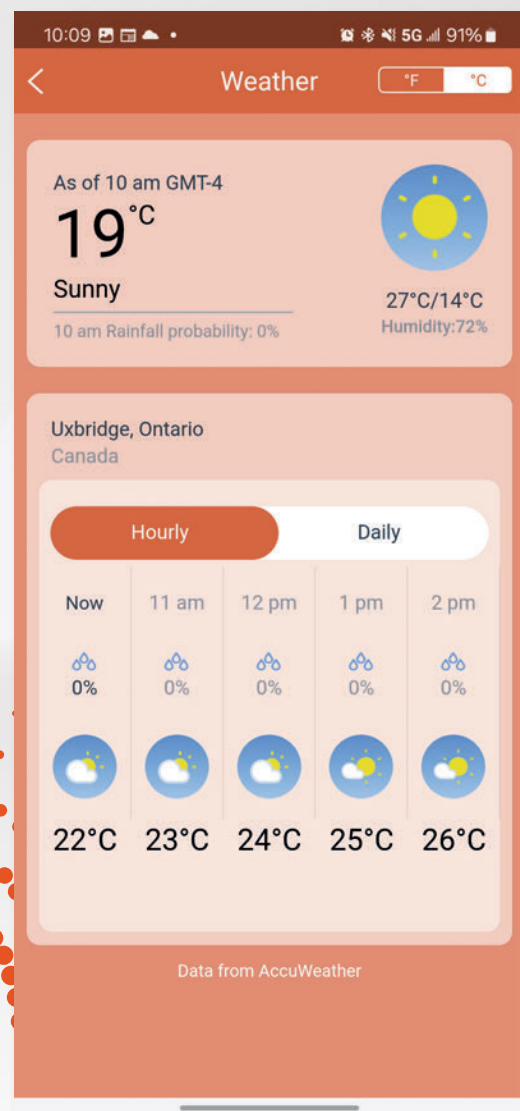

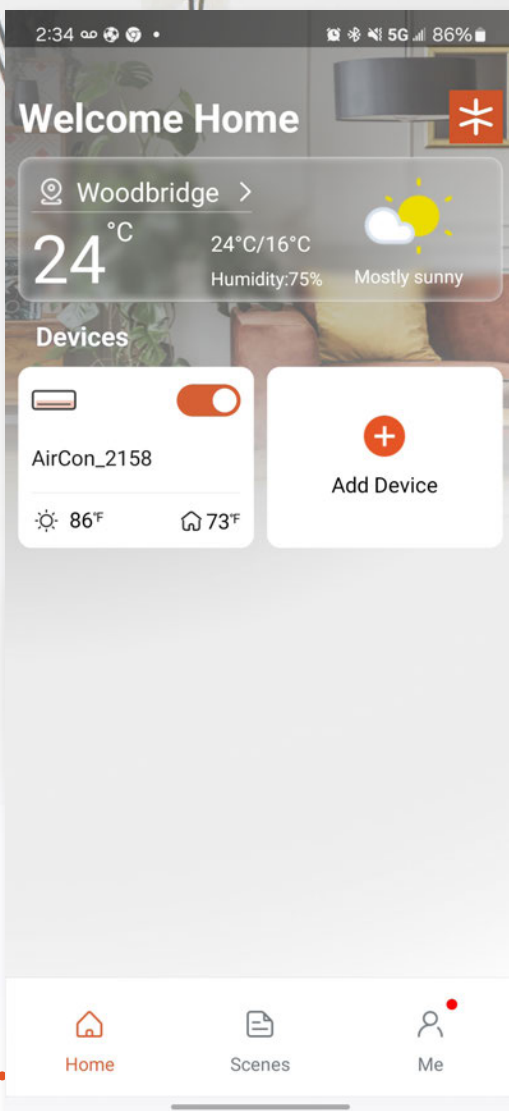

ALEXA &
GOOGLE

WEEKLY
SCHEDULE

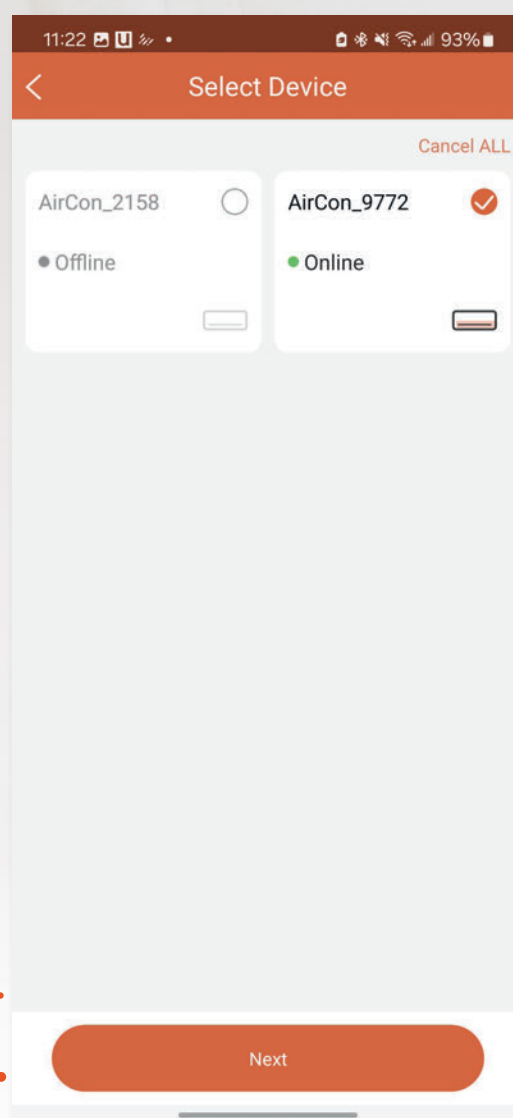

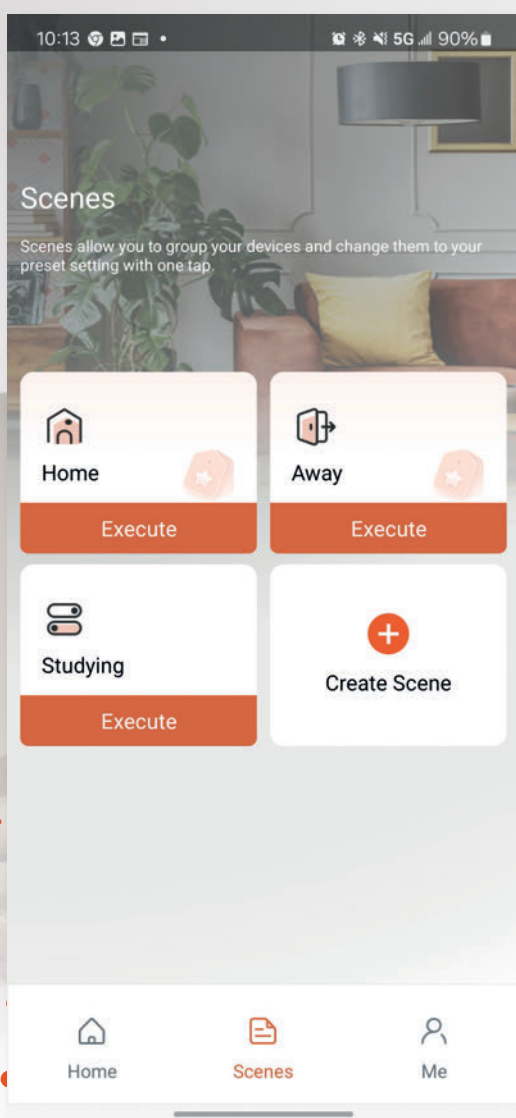

Weather

- Check the current weather conditions at a glance.
- Access a 15-day weather forecast and get hourly updates to stay informed.
- Stay ahead of the weather to help manage your energy use efficiently.

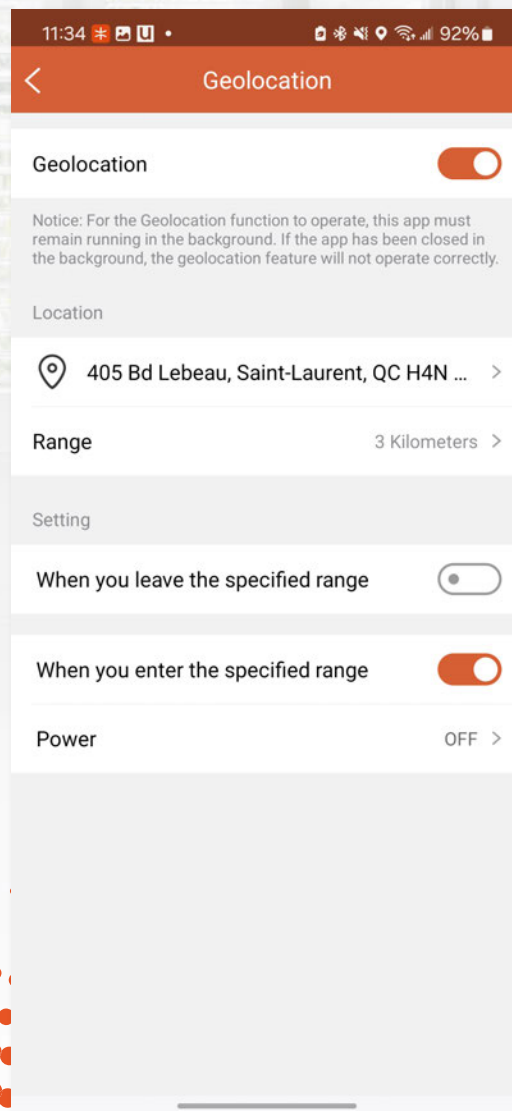

- Set up scenes to control multiple products with a single tap.
- Create scenes tailored to your needs, with options to trigger them automatically or manually.
- Use scenes to easily manage multiple products at once, saving time by avoiding individual controls.

Geolocation

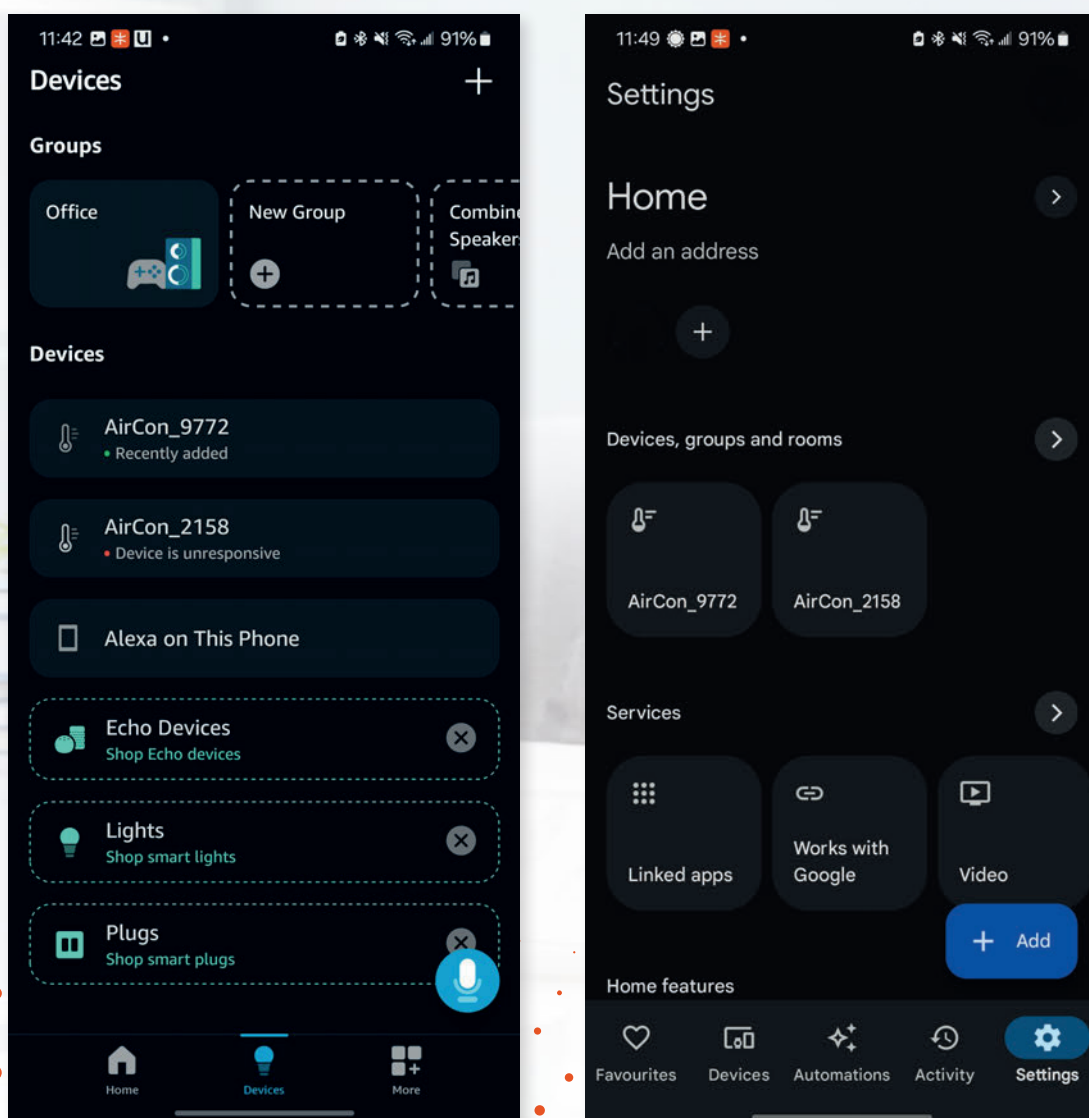

- Forgot to turn off your unit when you left home? Or want your system to turn on before you return?
- Simply set your home location, and your system will automatically turn off when you leave and turn on when you arrive.

Alexa & Google

- Use Alexa and Google Voice to easily command a scene.
- Set up a Alexa command like "turn on unit," then link it to a scene you've created. Just say, "Hey Google, turn on unit," and Google will trigger the scene, turning on your unit automatically.

Weekly Schedule

- Set a schedule, just like an alarm clock, to have your system turn on or off at any time you choose.

A screenshot of the MOOVAIR mobile app's 'Add Schedule' screen. The screen is divided into several sections. At the top, there's a status bar showing the time 2:35, battery level 86%, and 5G signal. Below that, a header bar with a back arrow and the title 'Add Schedule'. The main content area has three tabs: 'On and Off' (selected), 'Turn On', and 'Turn Off'. Under 'On and Off', there are two columns of time pickers. The left column is labeled 'Turn on time' and has three options: 01:44 AM, 02:45 PM (selected), and 03:46 PM. The right column is labeled 'Turn off time' and has three options: 01:54 AM, 02:55 PM (selected), and 03:56 PM. Below the time pickers, there's a 'Repeat' section with a toggle switch turned on. Under the toggle, there are three tabs: 'Weekdays' (selected), 'Every Day', and 'Custom'. Below these tabs, it says 'Schedule will run Monday-Friday'. Further down, there's a 'Setting' section with 'Heat 86°F 80%' and a 'Label' section with 'Unnamed'. At the bottom, there's a large orange 'Save' button.
